

MINERALS & METALS

Company Overview | September 2026

AMARA GLOBAL RESOURCES LIMITED

Lusaka, Zambia

AMARA GLOBAL

SHAPING VALUES - BUILDING LEGACIES

Mining, Refining & Trading of Gold, Lithium, Coal, Fuel Oil, Dolomite, Manganese & Limestone From Africa

COMPANY OVERVIEW

The name **AMARA** means **"EVERLASTING,"** reflecting our commitment to growth and long-term value for partners, clients, and employees alike.

We are a young, dynamic and forward-thinking organization committed to delivering high-quality, **sustainable** building products that meet the evolving needs of our clients. As a business, we look forward to have an everlasting association with our partners, clients and employees by seamlessly integrating global expertise with local insights. Our commitment to excellence and sustainability drives us to create value for all those who are associated with us with an aim to position us as a trusted business partner.

We are fortunate to position ourselves in some the world's fastest-growing economies, drawn by increasingly diverse markets and infrastructure development under the patronage of their visionary leaders who have put the country on the growth map in a brief span of time. Built on a strong foundation of integrity, innovation, and excellence, we position ourselves to grow into a trusted and reliable partner. Our journey has been driven by a clear vision of our partners who have created sustainable value for our customers while continuously adapting to market trends and technological advancements. The management team consists of professionals that have worked in "C" levels with various large corporation globally. Our experienced team of experts, leverage cutting-edge technology and data-driven strategies to deliver reliable, efficient, and sustainable outcomes.

We aim to maintain the highest standards of professionalism and accountability in every aspect of our operations. By fostering a culture of excellence, inclusion and continuous improvement, we ensure that our processes, services, and outcomes remain efficient, reliable, and competitive. We constantly strive to provide effective solutions by leveraging our business knowledge, best in class practices and technical expertise as we believe in continuous research, learning and exploration to provide innovative products.

As an upcoming young leader in refining and trading essential minerals in Zambia, Tanzania, Guinea Conakry, we aim to deliver quality minerals with sustainable practices, Integrated refining and trading across multiple commodities.

OUR COMMODITY PORTFOLIO

GOLD

High-purity refining and export focus

LITHIUM

Emerging market with growing demand for battery materials

COAL

Thermal coal supply for domestic and regional energy markets

FUEL OIL

Trading of refined fuel products for industrial use

DOLOMITE

Supply for steel and cement industries

MANGANESE

Critical alloy component with steady demand

LIMESTONE

Construction and industrial mineral applications

Integrated Business Model

End-to-end value chain delivering responsibly sourced, high-quality minerals and energy products from Zambia to the world.

Our Commodities

						
Gold	Lithium	Coa	Fuel Oil	Dolomite	Manganese	Limestone

Responsibly Sourced. Expertly Refined. Globally Delivered.

ESG, Safety & Community Impact

Building value responsibly through people, planet, and governance.

Responsible Sourcing

We partner with ethical suppliers and uphold responsible sourcing practices across our value chain.

Worker Health & Safety

Safety is our core value. We foster a culture of prevention, training, and continuous improvement.

Environmental Controls

We implement robust environmental management systems to protect land, water, and biodiversity.

Emissions & Waste Management

We manage emissions and waste responsibly, promoting resource efficiency and circular approaches.

Local Employment & Skills Development

We create local jobs and invest in training to build skills and strengthen communities.

Community Engagement

We engage openly with communities and support initiatives that contribute to shared, long-term value.

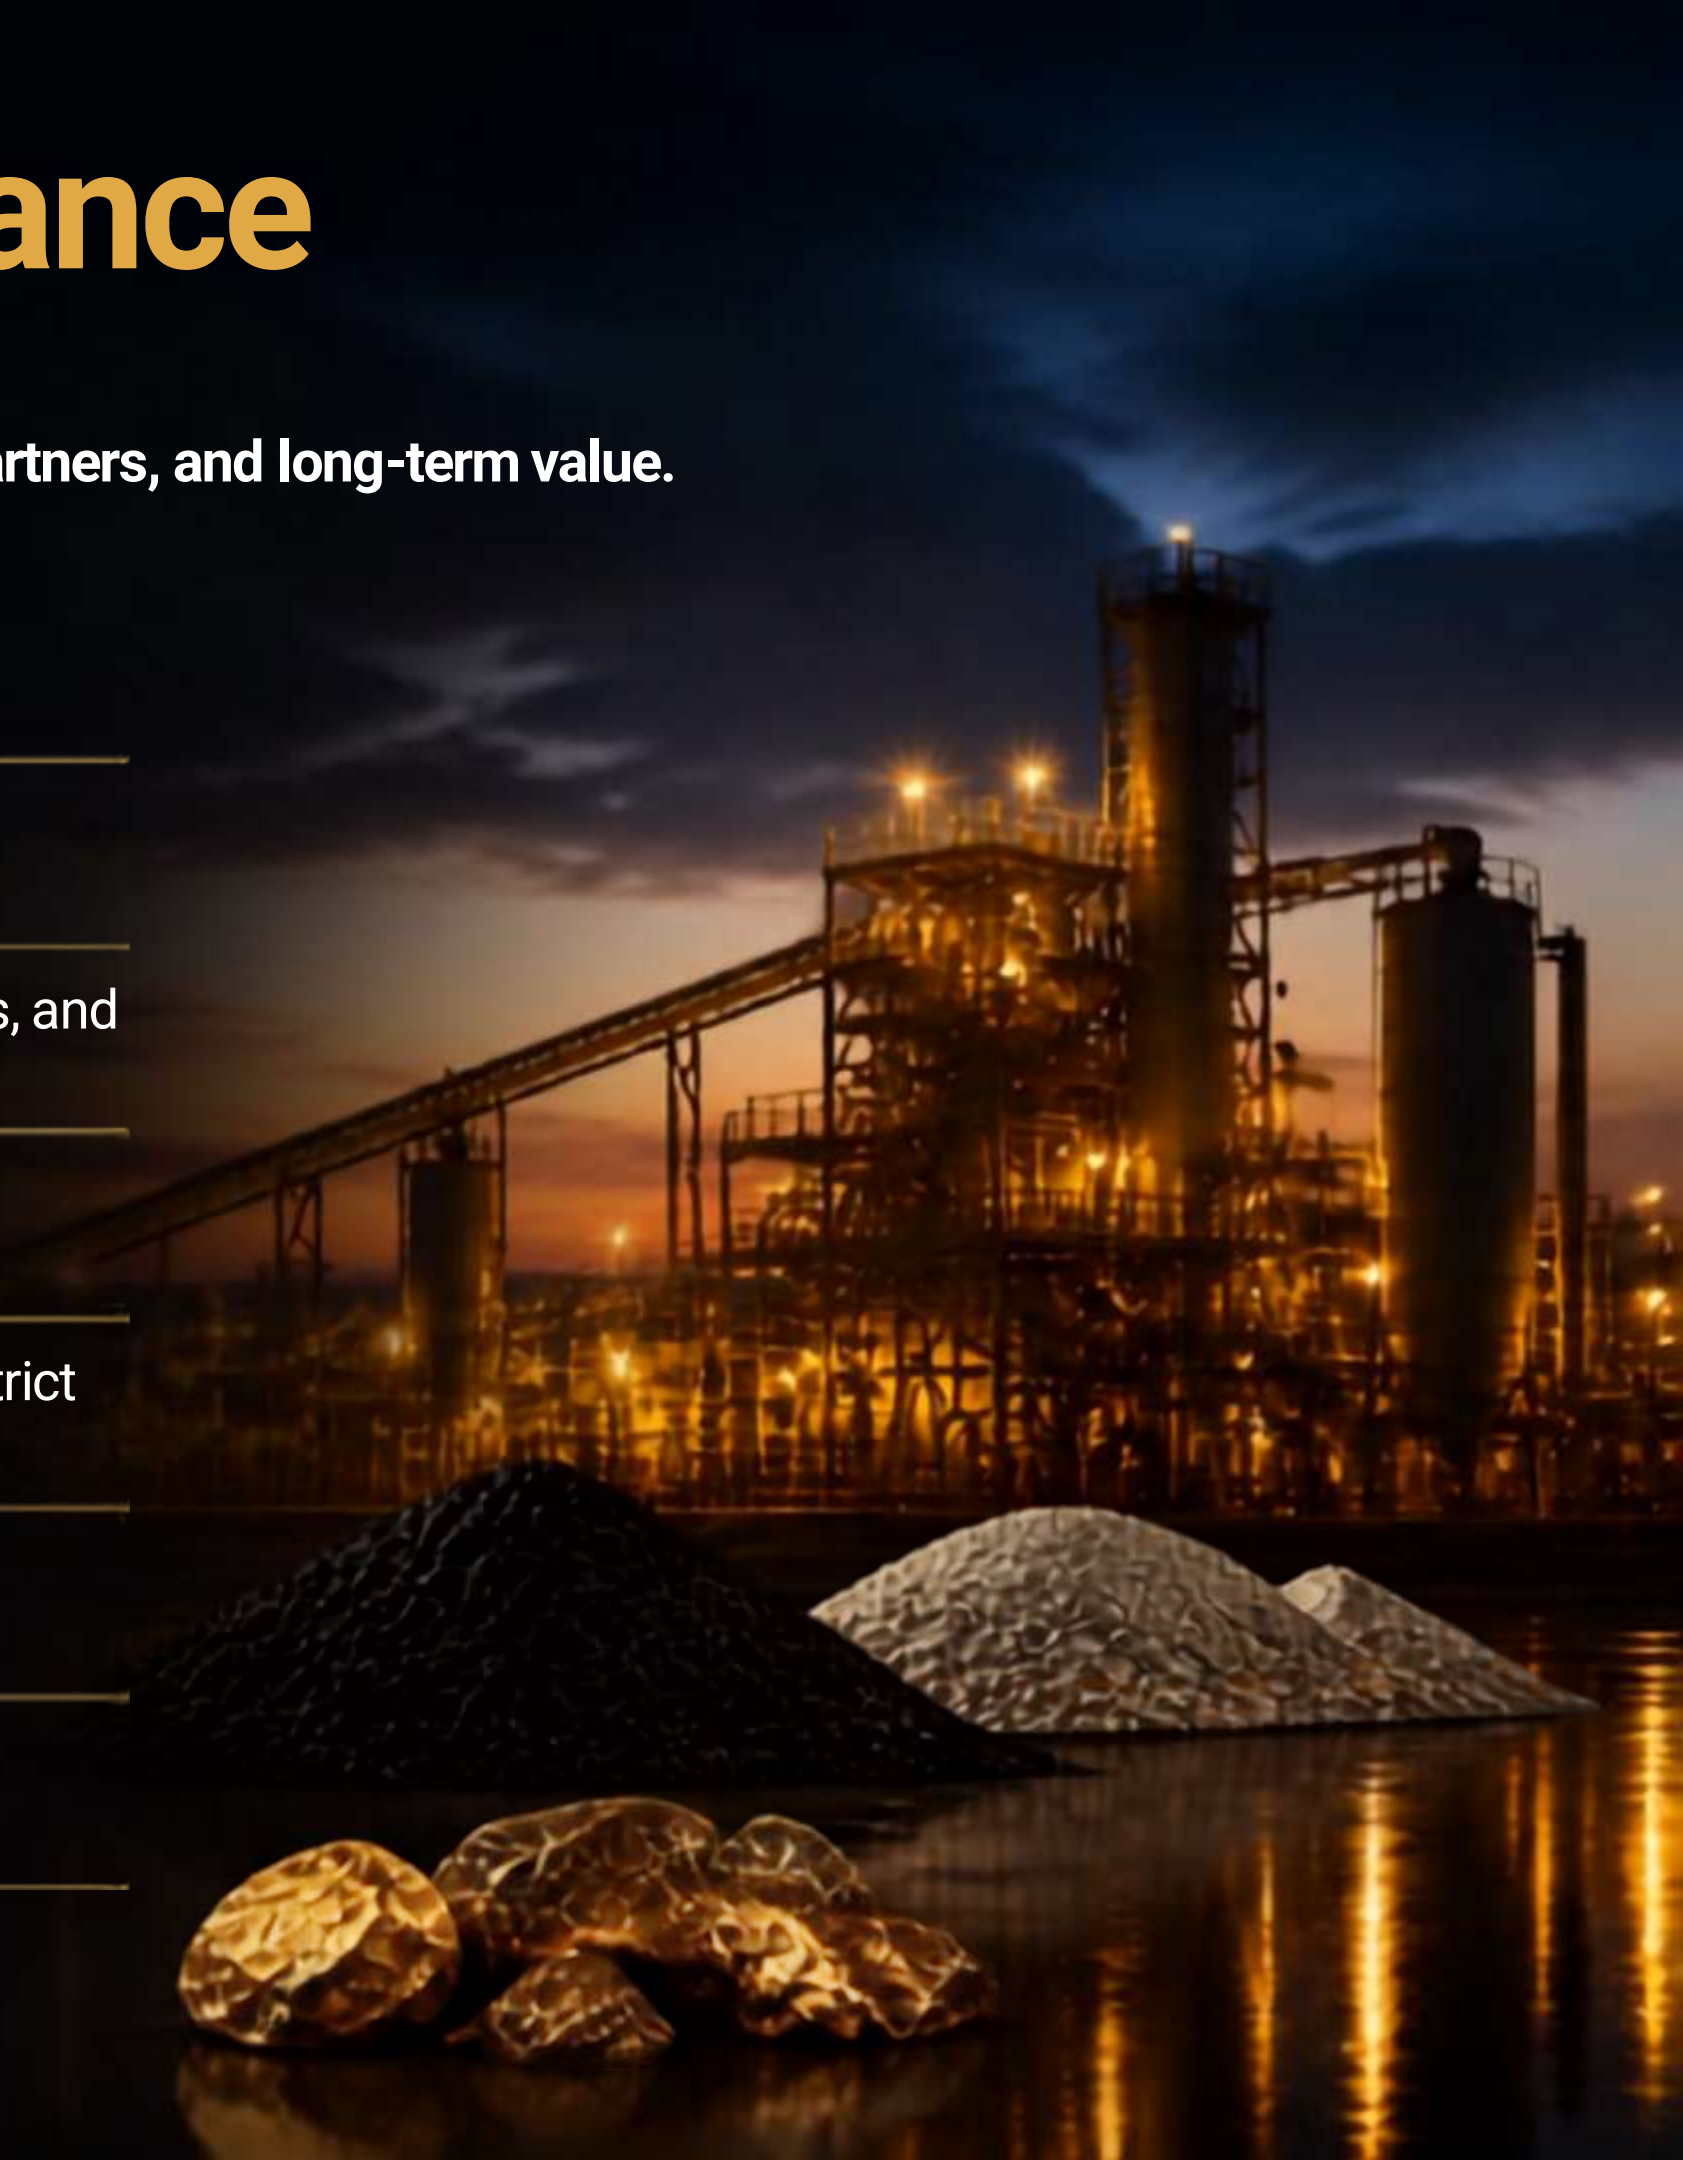

Transparent Governance

We operate with integrity, accountability, and transparency—upholding strong governance and ethical business practices.

Risk Management & Compliance

Proactively identifying risks and executing controls to protect our people, assets, partners, and long-term value.

KEY RISK AREA	MANAGEMENT RESPONSE
 Commodity Price Volatility	Hedging strategies, market intelligence, and diversified product exposure.
 Supply Continuity	Diverse supplier base, long-term agreements, and strategic inventory management.
 Logistics & Border Risk	Route planning, vetted logistics partners, and proactive border clearance.
 Quality Assurance	Rigorous testing, certified laboratories, and strict process controls.
 Regulatory Compliance	Adherence to Zambian laws and international standards with regular audits and training.
 Foreign Exchange Exposure	Multi-currency accounts, forward contracts, and disciplined FX risk management.
 Counterparty Risk	Counterparty due diligence, credit limits, and secure contract structures.

MARKET CONTEXT & TRENDS

+18%

growth in Zambia's
mineral exports value
year over year

+16%

increase in export
volumes
year over year

2.5X

global lithium demand
projected growth by 2030
driven by EV battery market

RISING

regional energy demand
supporting coal and fuel
oil consumption

ZAMBIA MINERAL EXPORT VOLUME TREND

million tonnes

STRATEGIC OUTLOOK

Expanding lithium refining capacity
to meet rising global demand

Diversifying coal and fuel oil trading
to regional power producers

Investing in value-added processing
for manganese and dolomite

Strengthening supply chain resilience
and ESG initiatives

A close-up photograph of a hand holding a gold ring. The hand is positioned diagonally across the frame, with the fingers gripping the ring. The ring is a simple band with a textured, possibly braided or woven, pattern. The background is a soft-focus green, suggesting foliage or a natural setting. The lighting is warm, highlighting the texture of the skin and the metallic sheen of the ring.

GOLD

MORE THAN A PRECIOUS METAL

ONE OF THE RAREST ELEMENTS ON EARTH

USED FROM ANCIENT TIMES TO MODERN TECHNOLOGY

VALUED ACROSS SCIENCE, INDUSTRY, AND CULTURE

1 Mining

2500 acres of proven resources with mining permission in Zambia

2 Refinery

100 KGs / Day gold refinery in Zambia

3 Trading

2.4 Tons / PA of Gold Trading in Dubai

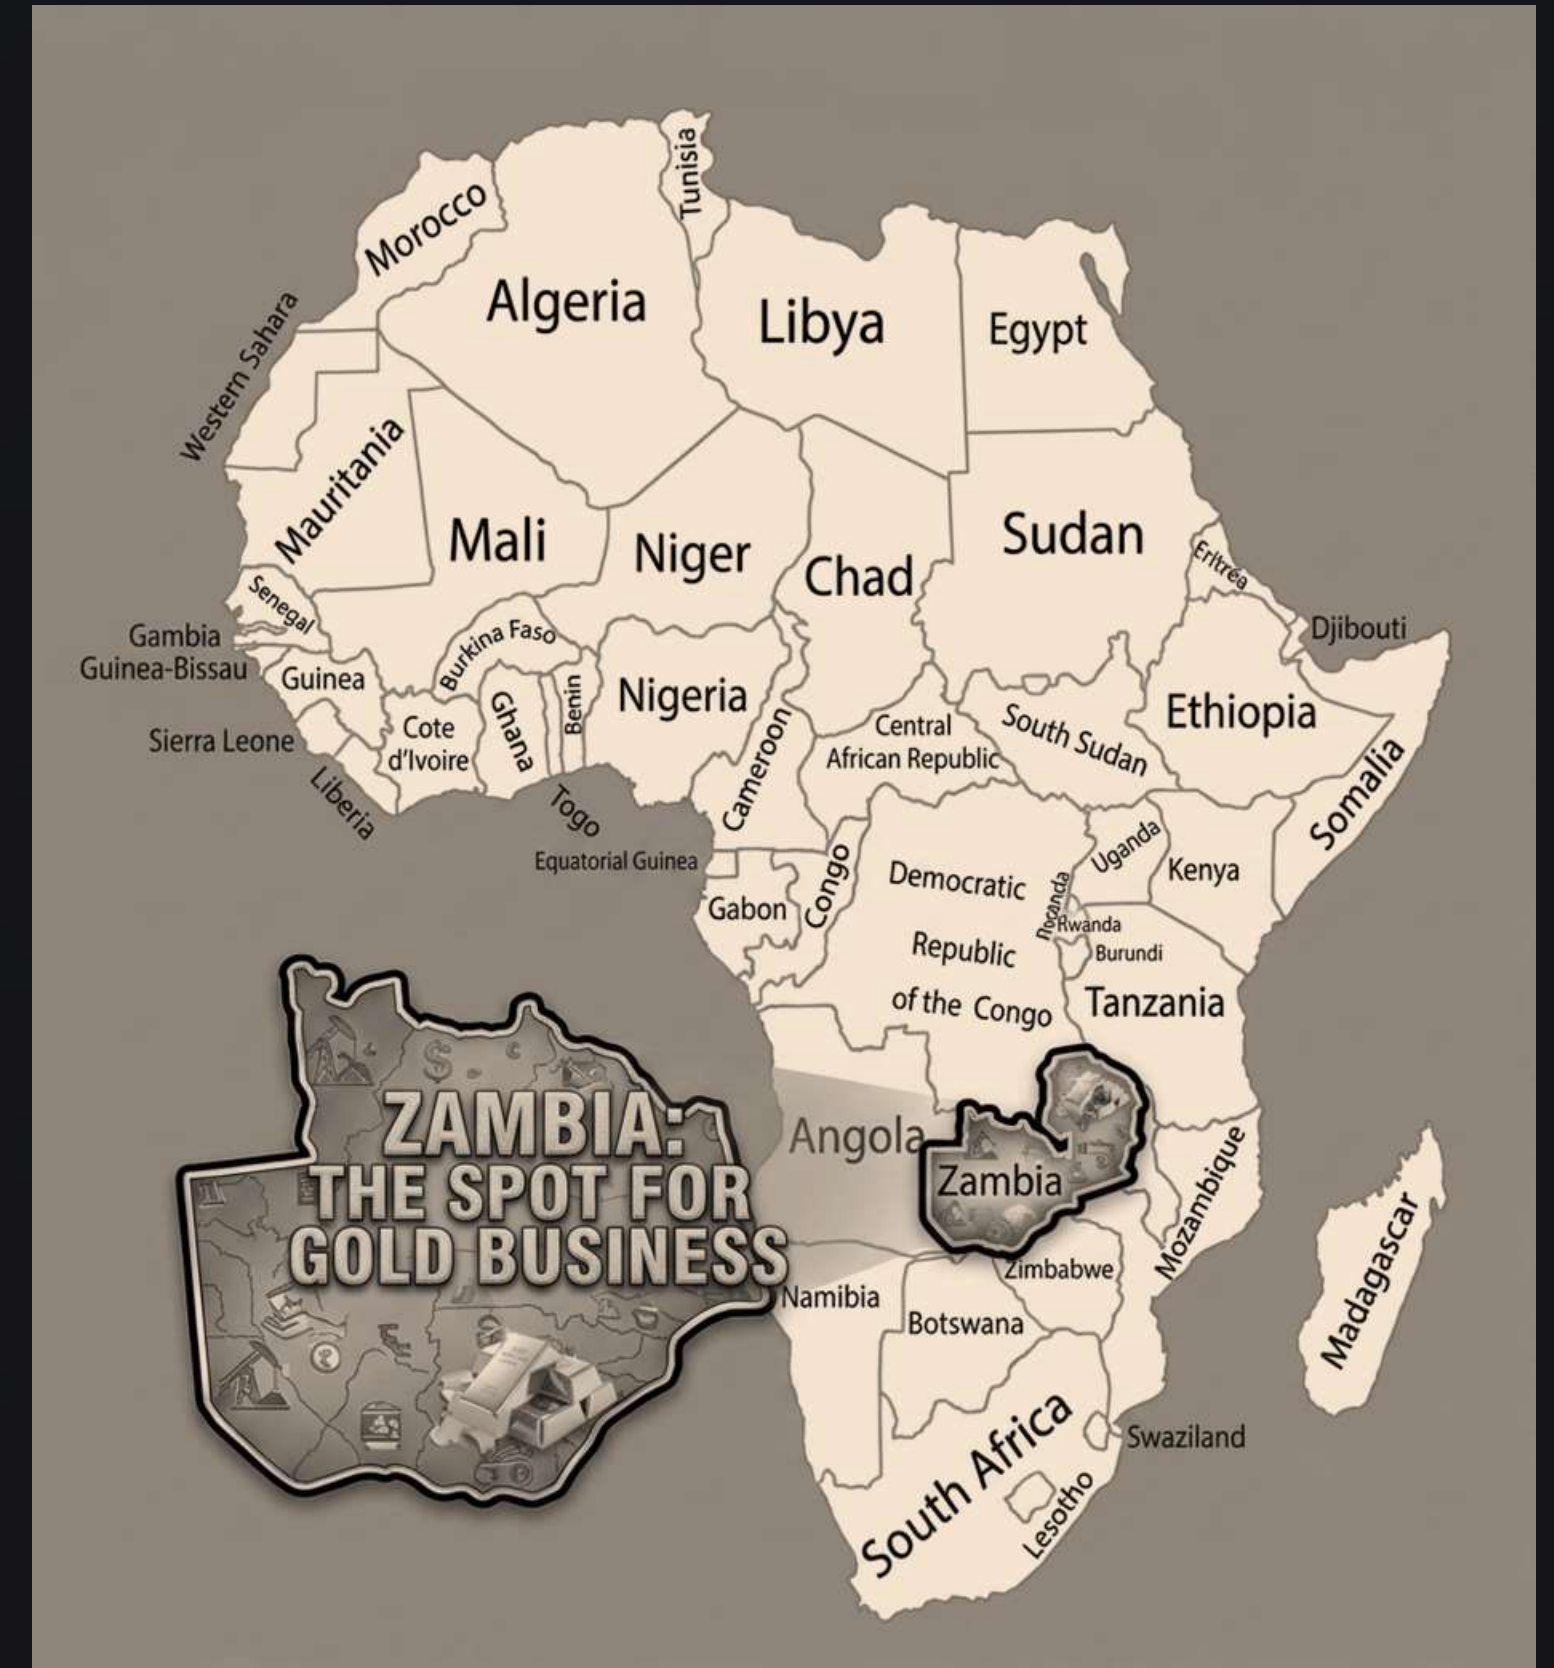

GOLD

ABOUT ZAMBIA

Zambia is a landlocked, resource-rich country in Southern Africa known for its, peaceful reputation, abundant wildlife, and the Zambezi River. With a population of over 20 million, it is highly urbanized, yet features vast wilderness areas. It is famously home to Victoria Falls, a major tourist destination bordering Zimbabwe.

Key Details About Zambia:

- **Location & Geography:** Bordered by eight countries, including Angola, Tanzania, and Zimbabwe, and features a warm, tropical climate with abundant water sources like the Zambezi River.
- **Capital & Major Cities:** The capital and largest city is Lusaka, which serves as the political and economic hub.
- **Economy:** Zambia's economy is largely driven by mining, particularly copper, which is a major export product.
- **Government & History:** Gained independence from the United Kingdom on October 24, 1964, and operates as a presidential representative democratic republic.
- **Population & Culture:** Known for its diverse population comprising over 70 distinct ethnic groups, with a high degree of cultural harmony.
- **Tourism:** Known as the home of the walking safari, the country offers significant tourism attractions like Victoria Falls, extensive national parks, and bungee jumping
- **Official Language:** English.
- **Currency:** Zambian Kwacha (ZMW).
- **Official Religion:** Declared a "Christian nation" in 1992, with over 90% of the population adhering to Christian faiths.
- **Safety:** Regarded as one of the safest and most welcoming countries to visit.

ABOUT ZAMBIA

Zambia is one of the most highly urbanized countries in sub-Saharan Africa, with 44% of the population concentrated along the major transport corridors, while rural areas are sparsely populated. The onset of industrial copper mining on the Copperbelt in the late 1920s triggered rapid urbanization. Although urbanization was overestimated during the colonial period, it was substantial.^[90] Mining townships on the Copperbelt soon dwarfed existing centers of population and continued to grow rapidly following Zambian independence. Economic decline in the Copperbelt from the 1970s to the 1990s has altered patterns of urban development, but the country's population remains concentrated around the railway and roads running south from the Copperbelt through Kapiri Mposhi, Lusaka, Choma and Livingstone.

Largest cities or towns in Zambia							
According to the 2010 Census ^[1]							
Rank	Name	Province	Pop.	Rank	Name	Province	Pop.
1	Lusaka	Lusaka	1,747,152	11	Solwezi	North-Western	90,856
2	Kitwe	Copperbelt	501,360	12	Mansa	Luapula	78,153
3	Ndola	Copperbelt	451,246	13	Chililabombwe	Copperbelt	77,818
4	Kabwe	Central	202,360	14	Mazabuka	Southern	71,700
5	Chingola	Copperbelt	185,246	15	Kafue	Lusaka	71,573
6	Mufulira	Copperbelt	151,309	16	Kalulushi	Copperbelt	51,863

10	Kasama	Northern	101,845	20	Nakonde	Muchinga	41,836

HOW GOLD IS FORMED

01

GOLD IS FORMED DEEP WITHIN THE EARTH THROUGH GEOLOGICAL PROCESSES THAT OCCUR OVER MILLIONS OF YEARS.

02

HIGH TEMPERATURES AND PRESSURE CAUSE GOLD TO SEPARATE FROM OTHER MATERIALS AND COLLECT IN ROCK FORMATIONS.

03

VOLCANIC ACTIVITY AND TECTONIC MOVEMENTS BRING GOLD CLOSER TO THE EARTH'S SURFACE. OVER TIME, EROSION BY WIND AND WATER CARRIES GOLD INTO RIVERS AND SOIL.

THE PROPOSITION

GOLD REFINERY | GOLD TRADING

01

GOLD MINING INVOLVES LOCATING GOLD DEPOSITS AND EXTRACTING THEM FROM THE GROUND.

THE PROCESS BEGINS WITH EXPLORATION AND DRILLING TO FIND GOLD-RICH AREAS.

02

ONCE FOUND, THE ORE IS CRUSHED AND PROCESSED USING HEAT OR CHEMICALS.

AFTER EXTRACTION, THE GOLD IS REFINED TO REMOVE IMPURITIES. MINING REQUIRES ADVANCED TECHNOLOGY AND CAREFUL SAFETY MEASURES.

GOLD MINING AND EXTRACTION

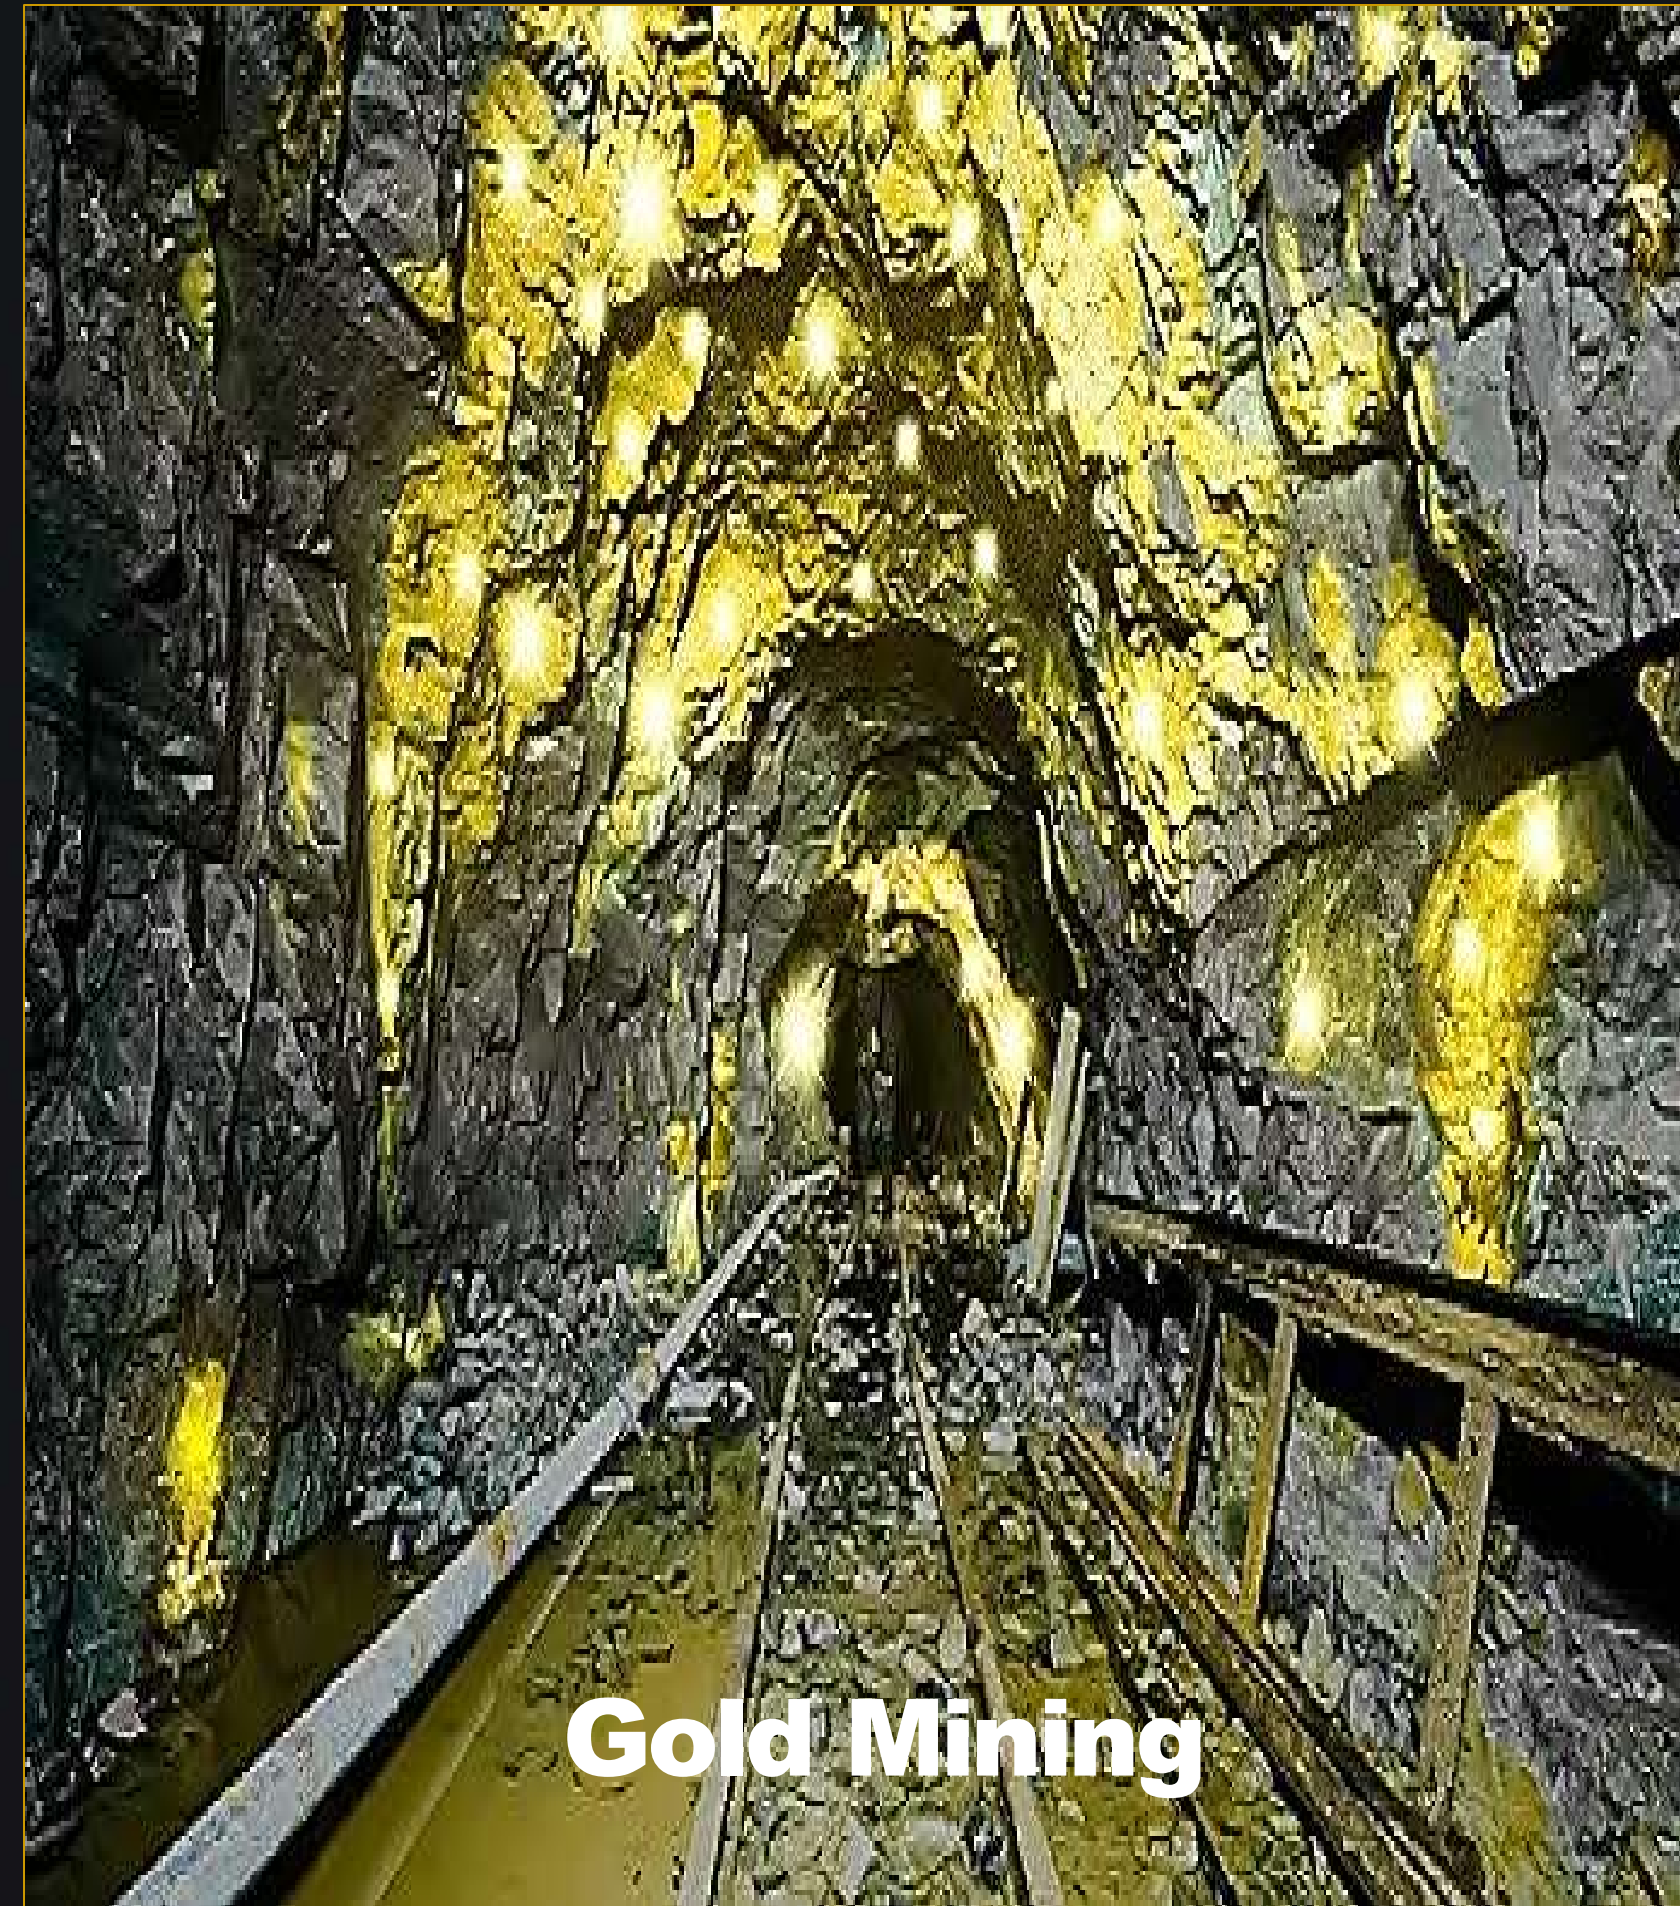

Gold mining is a large-scale global industry with significant environmental and social impacts. Over 187,200 tons of gold have been mined since the beginning of civilization, with roughly half going into jewelry. Industrial-scale mining, while producing vast amounts of gold, also generates substantial toxic waste and can displace communities. Artisanal and small-scale mining, though important for local economies, is a major source of mercury pollution.

Scale and Production

- **Global Production:** World gold production was around 3,612 tons in 2022.
- **Major Producers:** China, Russia, Australia and Africa are consistently among the top gold-producing countries.
- **Mine Life:** A typical gold mine operation can last for 10 to 30 years, with the actual productive life varying based on factors like gold price and ore grade.
- **Reserves:** Estimated global mine reserves of gold are around 59,000 metric tons.

Environmental Impacts

- **Waste Generation:** In Industrial gold mining produces vast amounts of waste, including toxic materials like cyanide and mercury.
- **Mercury Pollution:** Artisanal small-scale gold mining is a major source of mercury pollution worldwide.
- **Water Contamination:** Gold mining activities can contaminate water sources with heavy metals and other harmful substances.
- **Land Disturbance:** Mining can lead to habitat destruction, deforestation, and soil erosion

Long before any gold can be extracted, significant exploration and development needs to take place, both to determine, as accurately as possible, the size of the mineral deposit, as well as how to extract and process the ore efficiently, safely and responsibly. It can typically take between 10 and 20 years after a deposit is discovered before a gold mine is ready to produce material that can be refined into bullion.

Gold Mine Exploration: 1 - 10 years

Gold mine exploration is challenging and complex. It requires significant time, financial resources and expertise in many disciplines – e.g. geography, geology, chemistry and engineering.

The likelihood of a discovery leading to a mine being developed is very low - less than 0.1% of prospected sites will lead to a productive mine. And only 10% of global gold deposits contain sufficient gold to justify further development.

Once basic facts about the local geology and potentially viable deposit are established, the gold ore body can be modelled in detail and its feasibility assessed.

Gold Mine Development: 1 - 5 years

Gold mine development is the next stage of the gold mining process. It involves the planning and construction of the mine and associated infrastructure. Mining companies must obtain appropriate permits and licenses before they can begin construction. This will generally take several years, although this varies greatly depending on location.

Construction may not be confined to the mine itself. In addition to potential processing capacity, mining companies frequently construct local infrastructure and amenities to support both logistical and operational needs, as well as employee and community welfare. This development provides much long-term support for local communities, and one of the key initial ways gold supports wider socio-economic development.

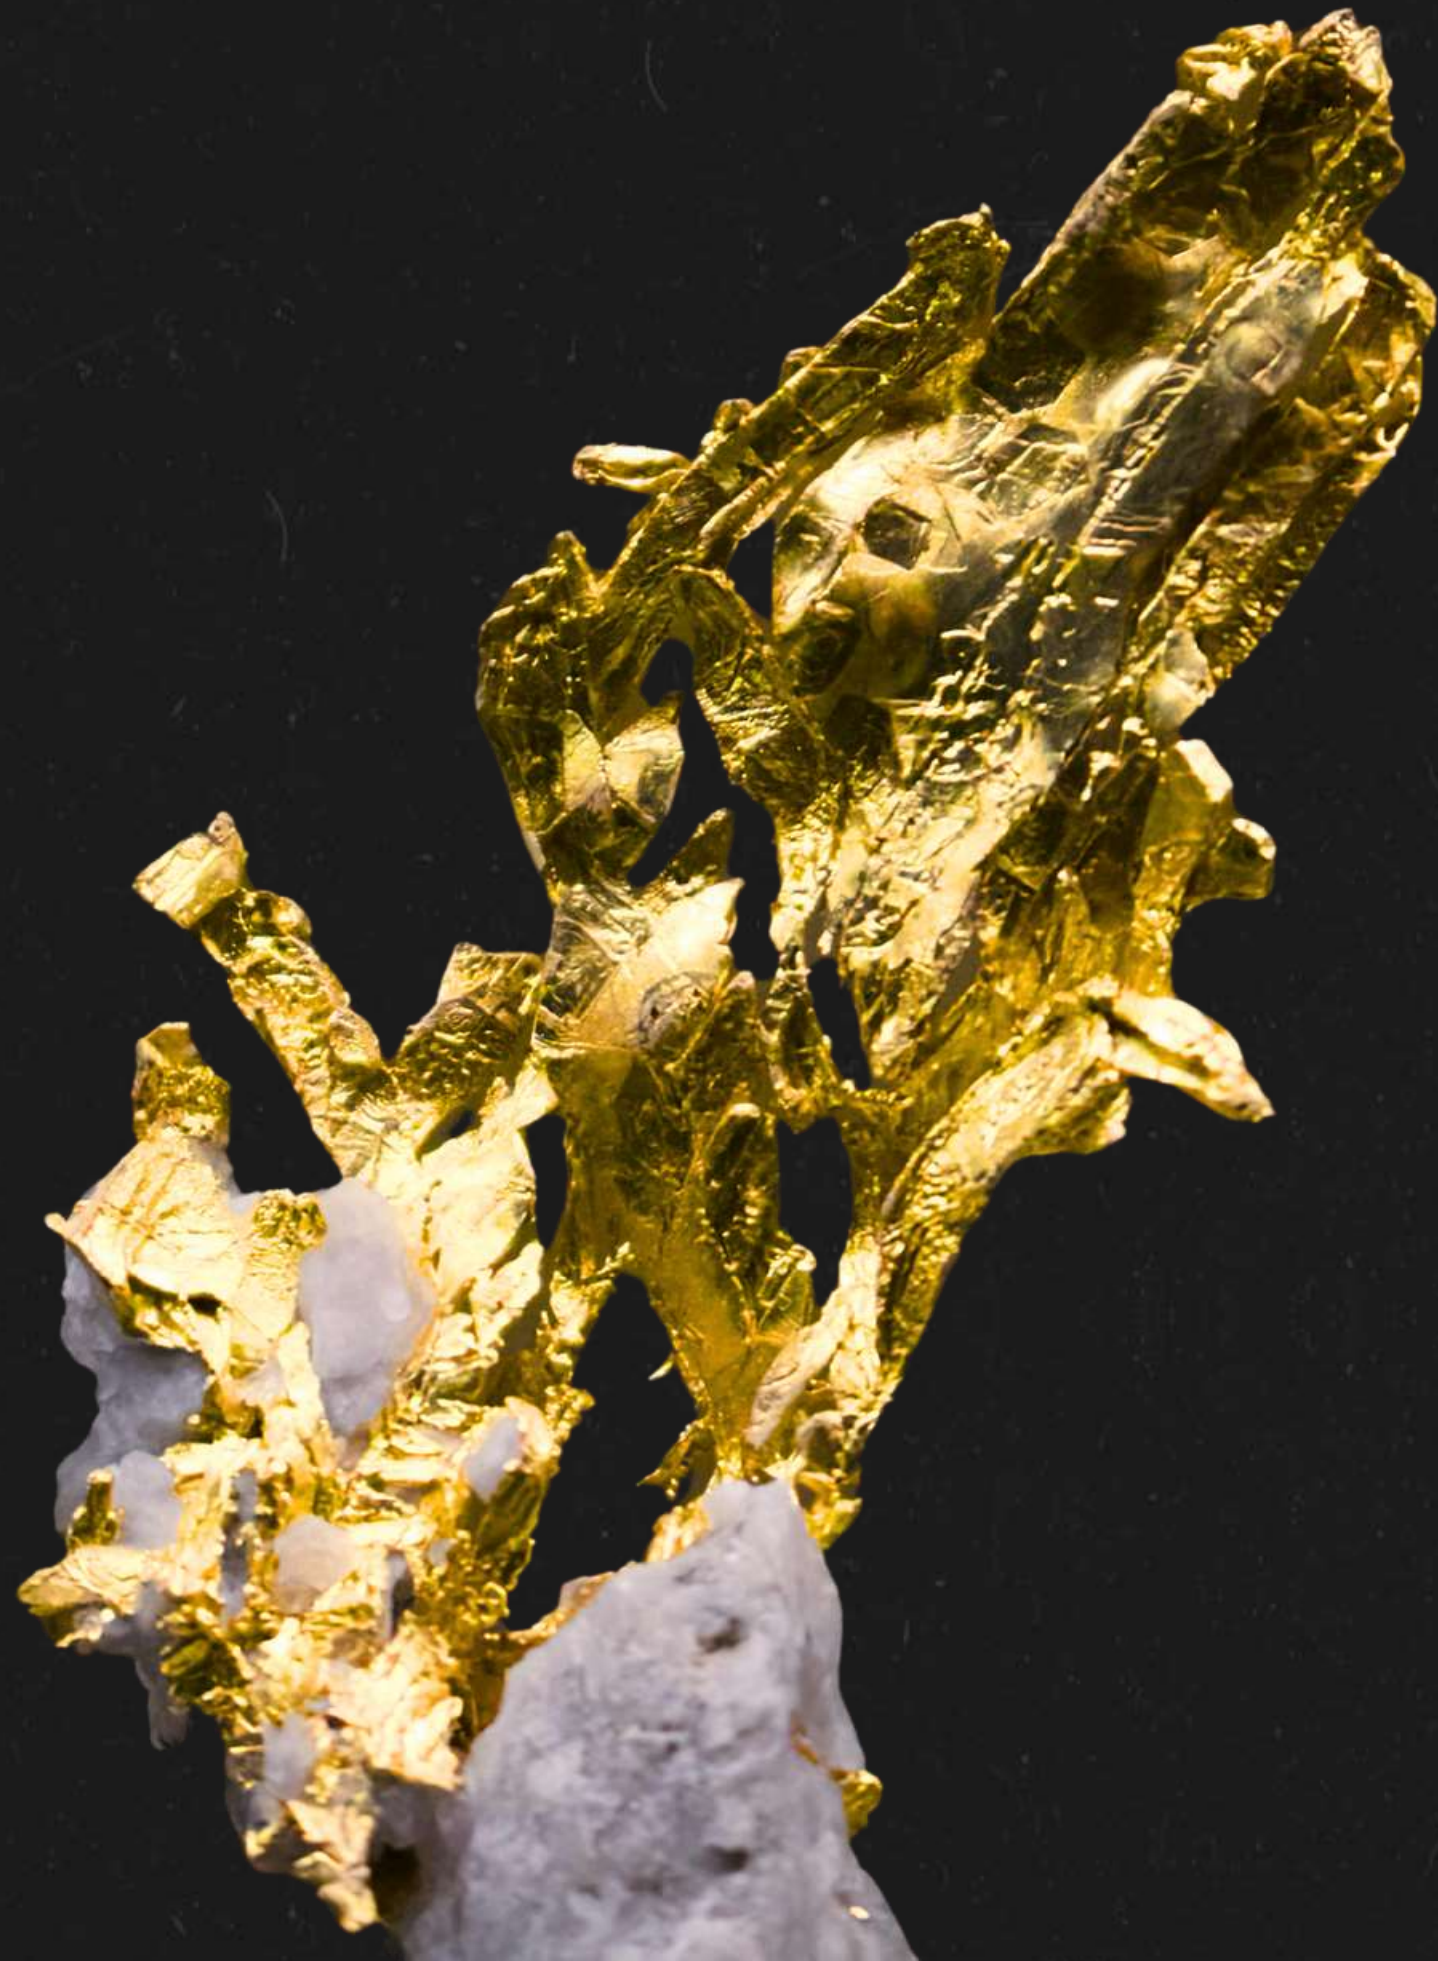

Gold Mining Operation: 10 - 30 years

The gold mining operation stage represents the productive life of a gold mine, during which ore is extracted and processed into gold. Processing gold involves transforming rock and ore into a metallic alloy of substantial purity – known as doré – typically containing between 60-90% gold.

During its life, a number of factors – such as the price of gold or input costs – will affect which areas of an ore body are deemed profitable (economic) to mine. In times of higher prices, mining low-grade ore will become profitable as the higher price offsets the increased cost of extracting and milling greater volumes. When the price is lower or costs rise, it might only prove profitable to extract and process higher-grade ores. Mine plans are regularly re-assessed as market conditions change, new technical information comes to light, and process and technological enhancements are considered.

Increasingly, technological advancements are making the gold mining process smarter, cleaner and more efficient. Mines are now designed with these technologies in mind and electrification, digitization and automation are becoming increasingly common elements reshaping gold mine operations and processes.

GOLD REFINING & ⁰¹ PROCESSING

OPERATIONAL CAPABILITIES

State-of-the-art refining plants
with rigorous quality standards

Strategic location with seamless
air connectivity

Extensive trading network linking
regional and global markets

Committed to responsible
environmental and social practices

The Refinery Project

Amara Global Resources Ltd has been incorporated with the intention of setting up a Gold Refinery in Lusaka, Zambia with a 100 KG processing capacity / day. The management team is in active discussions with 3 major refinery equipment suppliers for a fully automatic plant. The plant is designed on the AQUAREGIS technology which has a high recovery rate. The whole unit is standardized for DUBAI, SWISS and LONDON good delivery, although certification may not be availed for atleast 3 years.

The plant is intended to be set up by obtaining land from the Zambian Development Authority on long term lease.

- Land Area : 13,000 SFT
- Refinery BUA : 10,000 SFT
- Office Area : 2000 SFT
- Structure – 6.5 MTR height : G+M
- Compound : Closed with high security cordon

Our Trade model would be as follows;

Upon arrival of goods at the refinery, we sign a simple agreement with the metal owner and take the metal for refining and assay to purity of 999.9%

- Advance payment post purity : 50% as Cash
- ZRA Tax : 6%
- Insurance & Custom Bonding : 2%
- Residual Payment : 50% with in 5 days via bank transfer.

While the initial aim is to refine and trade 50 Kgs per week / 200 Kgs per month. We are in a position to sign supply commitments with 2 companies aggregating to 200 Kgs / month. The dependency for the supply chain remains with Mr. Robert and his network with the miners.

The Refinery Project

Management Team

Robert A Penney
Non Executive Chairman

Robert Penney is a senior professional in the field of finance and governance. A Qualified Accountant by training, he has served various government and private enterprises spearheading the organization.

Originally from Ireland, Robert was with PKF Chartered Accountants before their rebranding and has spent over 40 years in Zambia at senior levels in finance and business management including the areas of manufacturing, property development, Agriculture related industries, mining, security services, and leisure industry to include trade management, investment, planning, fiscal control and accounting.

He had the privilege of working directly with two Zambian Presidents (Dr. Kenneth Kaunda & Rupiah Banda).

Some of Roberts former roles include;

- Chairman of Zambian Development Agency.
- Chairman of Lusaka`s Infrastructure Committee.
- Deputy Chair of Mayor`s Finance committee in Lusaka.
- Trade Consultant of Coras Trachtala (Irish Enterprise Board) – for Zambia; supporting Irish investments in projects and General Trade into Zambia.
- Guest lecturer at Wake Forest University NC on an invitational basis for MBA students.
- Trustee and President of the Children of Africa foundation.
- Hon Life Vice President of the Lusaka Golf Club since 1996
- Chairman (10th Year) Zambia Open International Golf Tournament South African Sunshine Tour (SST) a golf calendar event, held annually at Lusaka Golf Club.

Management Team

Jayessh Bharaathan

CEO & Group Managing Director

Jayessh is the founder of Amara Global Holdings Ltd. A former C-suite Banker, dealmaker, and institutional architect with over 32 years of high-impact global experience commanding multi-million-dollar capital ventures across the Middle East, Asia, and Africa. His authoritative corporate leadership was forged during more than three decades at the absolute pinnacle of international banking, directing critical executive operations for premier financial institutions including Citibank, ABN AMRO, Emirates NBD and FirstRand banking group.

A master of cross-border fund structuring and high-stakes capital stewardship, he functioned as Senior Vice President (ME & India) at Forsyth Partners a UK based Asset Management company with over 4.5 billion dollars under management and subsequently as Executive Director (ME and India) at FirstRand Banking group one of the top 100 banks in the world, where he masterminded a complex joint venture and initiated a specialized investment fund focused on the Indian economy. As Executive Director at Channel Capital Partners LLC & thereafter as CEO and Chief Strategist of Clover Bank's Investments, Jayessh solidified his reputation as a premier corporate rainmaker, spearheading private equity, capital-raising campaigns before deploying into sophisticated transactions that has generated high alpha.

His capacity for driving exponential corporate scale and operational transformation is demonstrated by his decisive governance as CEO & Group Managing Director of Electrolux Commercial Services consistently optimizing operational efficiencies. During his professional tenure, he worked as a advisor to a few corporate boards and the Private Office of H.E. Sheikh Tariq Bin Khalid Al Qassimi.

He possesses a sound track record of guiding high-velocity ventures from initial concept to massive capital deployment. This mastery of global microeconomic strategy is mirrored by his presence as an international thought leader, delivering definitive insights on global M&A opportunities and foreign investment dynamics at global forums including the World Finance & United Exchange Summit and the Overseas Private Investor Forum in Liaoning China. He has also delivered India as an Investment destination at AUT in New Zealand, soliciting capital into the Indian markets.

Seamlessly integrating advanced data analytics with a human-centric philosophy that optimizes multi-tiered workforces, Jayessh delivers the rare synthesis of financial mastery, sharp deal-making acumen, and board-level dominance required to champion total fiscal and strategic governance for a large enterprise.

Management Team

(C.A) Dayakara Shetty
Chief Financial Officer

Dayakara Shetty is a seasoned professional in the field of financial administration, corporate governance and treasury. A Chartered Accountant with over 30 years of strategic financial leadership across the UAE and India, he bring extensive experience to the table. I have a proven track record of managing full-cycle financial operations for companies with revenues up to AED 150 million.

His expertise spans P&L management, budgeting, and high-level MIS reporting to drive organizational performance. He specializes in commercial strategy, including complex project costing, revenue recognition, and tender management. He brings deep experience in corporate and trade finance, from project funding to LC and Bank Guarantee administration and has successfully led M&A due diligence, corporate structural design, and multi-level group account consolidations. He is highly skilled in implementing robust ERP systems, such as Microsoft Dynamics Axapta and Oracle, to optimize efficiency. Throughout his career, he has effectively mentored and directed multi-disciplinary teams. His diverse industry background includes Facility Management, Oil & Gas, Marine Engineering, and Manufacturing. He is dedicated to delivering high-impact financial governance and strategic growth to ensure sustainable business success.

Rachita Bhat
Director

Rachita Bhat is a results-driven executive with over 18 years of experience leading high-impact business development and marketing initiatives across the hospitality, catering, IT, and aviation sectors. Throughout her distinguished career, she has maintained an exceptional client retention rate, proving her ability to cultivate long-term, high-value partnerships. Rachita is a strategic visionary who excels at conceptualizing market entry strategies and establishing scalable infrastructure for new business ventures.

An expert in multi-channel brand positioning, Rachita integrates tailor-made solutions and innovative event management to capture market share and elevate brand presence. Her leadership style combines technical savvy with a deep foundation in general management, allowing her to translate complex market trends into actionable growth strategies. She is highly adept at navigating administrative and operational complexities, ensuring that marketing efforts are perfectly aligned with business delivery models and regulatory requirements. Rachita excels at fostering strong relationships with key stakeholders and driving collaborative team performance. She demonstrates an unwavering commitment to organizational excellence and long-term profitability and remains dedicated to delivering innovative, client-centric solutions.
